Input Format:

The first line contains an integer n, denoting the size of the array.

The second line contains n space-separated integers, representing the elements of the array.

Sample Input:

6

3 3 1 1 1 2

Sample Output:

[1, 1, 2, 2, 2, 3]

Explanation:

[3, 3, 1, 1, 2] we have {3:2,1:3,2:1}. So now 2 has to appear 3 times and 3 has to appear 1 time and 1 has to appear 2 times.

So the list we get is [2, 2, 2, 3, 1, 1] sorting the list we have [1, 1, 2, 2, 2, 3]

Source Code:

2. March 1. 2. Ber 2. Mr. 1. 2. Ber 2. Mr.

```
n=int(input())
a=list(map(int,input().split()))
d={}
for i in a:
    if i not in d:
        d[i]=1
    else:
        d[i]+=1
res=[]
for key,val in d.items():
        res+=[val]*key
res.sort()
print(res)
